

Pedigrees 2020 and EasyPed Summer Sale

These are the savings programs Will Ruther can offer to USGF members.

While I have had these pricing arrangements in place for many years now, all such offers are subject to cancellation or change without notice. Discounts will be applied to the standard pricing in place at the time of the order. Multiple discounts may not be applied.

1) On-going club membership discount of 15% on single copy orders. Shipment will include a CD and hardcopy user's guide.

OR

2) From the present to Aug 15, 2008, USGF Club members can purchase a users license for Pedigrees2020 and will receive the "EasyPedigreeDB Interface Option" free of charge.

OR

3) Multiple copy discounts: to be eligible for a multiple copy discount all copies must be ordered in a single transaction. Contact information for each user must be supplied by e-mail at the time of the transaction. Each user must download their package from the Pedigrees2020 web site. The download package will include a PDF user's guide. No shipping charges will be applied to the order.

- Orders of 3 to 5 copies will receive a 20% discount.
- Orders of 5 or more copies will receive a 25% discount.

Please note: As with most computer software, licensing for Pedigrees2020 is for one user. The license is activated at the time of installation on the user's computer with a license key supplied by Software Enterprises. Licensing keys will be issued to the user upon their acceptance of the conditions set forth by the agreement. Each licensed copy may be installed and activated on a single computer.

EasyPedigreeDB What is it?

EasyPedigreeDB is a web site software package that allows its user to host an online pedigree database access for web browsers. It provides web browsers with search capabilities, Pedigrees displays and Offspring lists. Displays may be printed using most standard browsers.

The Pedigrees2020 add-on package communicates directly to any web site that has the EasyPedigreeDB package installed on it. This provides the owner of an EasyPedigreeDB web site an easy method of maintaining their on-line database

When other users that have the add-on visit an EasyPedigreeDB web site using Pedigrees2020, instead of a web browser, the web database acts as an EXTENSION of their own database. (Read-only, no data is permanently retained on the visitor computer)

- 1) Dead Ends on the visitors P2020 pedigree display are automatically filled in.
- 2) Offspring lists are extended to include offspring from the web site.
- 3) Pedigrees may be printed in a preferred style with missing parents etc. filled in.
- 4) More accurate inbreeding coefficient can be calculated because more generations are available.

The visitors own data is protected from public view and at the same time the EasyPedigreeDB web site owner's database is protected from unauthorized download.

The standard price for the EP add-on for Pedigrees2020 is \$40. Any USGF member can get this option for free with the purchase of any Pedigrees2020 version until August 15, 2008. Visit www.pedigrees2020.com and download the free demo. Feel free to call me at 218-236-8851 for any assistance you may need.

Yes an AUTHORIZED user can download the entire database.

The EasyPedigreeDB software on the web site has a password setup.

Here are the permission levels of that it can provide.

- 1) System Administrator... Has ALL rights listed below.
- 2) User Manager..... Can assign user accounts and Passwords.

3) Database Manager..... Can configure database & displays. Can create new databases, Upload or Download them independent of database permissions.

In addition the User manager can configure each database on the web site for Specific group or individual access.

Access levels for EACH database are as follows:

- 1) Web Read Access.
- 2) Change Design. (configure data displays on web site)
- 3) Allow Pedigrees2020 Read Access.
- 4) Allow Pedigrees2020 Write Access.

Using the above each database may be set for Public access Read AND Write, or read only or write only. Depending which "Group" the person connecting to the site belongs to. If desired the web site could be totally private with only a limited number of users having access. Or an Anonymous group (no user name and password are required at all) can be set up that allows ANY P2020 user to reference the web site.

For Pedigrees2020 a "Read Only" database means that it will not allow the user to "Save" any of the data from the web site. All Data is Display only. When it discovers a database for which its users has a password that allows Both read and write permissions, that user is free to Upload new data to the web site or download data from it to their computer.as permissions are designated.
